Kestrel Group goes “Beyond the Horizon” with the U.S. Department of Labor Office of Apprenticeship in developing a next generation Aviation Maintenance Technology Transport (AMT-T) OJT program.

Simpsonville, S.C., Dec 3, 2008 – The U.S. Department of Labor, Office of Apprenticeship has officially registered Kestrel Group of Simpsonville, South Carolina for what may be the only registered Aviation Maintenance Technician Transport (AMT-T) on the job training (OJT) program in the United States of America.

Beyond the classroom, experienced trainers in the workplace under actual conditions typically provide much of the later occupational on the job training (OJT) we get today. This training environment provides a realistic means to gain practical experience and to demonstrate individual skills through actual application. “The formal documentation or recording of this on the job training (OJT) may be one of the most important individual responsibilities of the aspiring industry professional and until now possibly one of the most neglected” states Jon V. Moldovan Sr., President/CEO Kestrel Group.

We at Kestrel Group have stepped up to fill this void by introducing our AMT-T OJT Program which provides a work as you go means of recording follow-on training that is adaptable to your unique work environment. The AMT-T OJT program is open worldwide to qualified applicants working in the aviation industry including both civil and military aviation occupations.

The Kestrel Group Aviation Maintenance Technician Transport (AMT-T) on the job training (OJT) program was developed in cooperation with the U.S. Department of Labor Office of Apprenticeship and registered as part of the National Apprenticeship Program in accordance with the basic Standards of Apprenticeship established by the U.S. Secretary of Labor.

About Kestrel Group- Kestrel Group was formed to provide specialized aviation consulting, certification, training and engineering services in support of the unique needs of corporate, fractional, head-of-state, military and general-aviation owners, operators and manufacturers worldwide. Our capabilities incorporate quality assurance, regulatory compliance; development of FAA approved data, FAA Supplemental Type Certificates, prototype design, fabrication and integration of avionics, cabin furnishings, entertainment systems, airframe structures, repairs, modifications, safety and egress. Our services also extend to aircraft condition evaluation and acquisition. For more information and details, please visit us at www.kstrl.com
